

Windward Reports at JavaOne: Get the Inside Scoop on Java Reporting

September 14th, 2010

Boulder, CO – Windward Reports, the champion of flexible and powerful reporting software, is heading to JavaOne on September 19 to meet up with the active community of Java developers from around the world. Windward Reports, which was developed initially as a Java reporting tool, provides power, speed and flexibility to any Java reporting application.

Attendees who stop by the Windward booth will learn firsthand how to break the bottleneck of reporting that leads to huge expense and a significant IS/IT resource drain. Because Windward uses Microsoft Office as its layout tool, Windward requires little training and no new software to learn. This means developers can hand many reporting tasks to non-developers and get back to other work.

This year's conference, from September 19-23 in San Francisco, goes back to its roots and showcases how Java technology is evolving. Developers will continue to see how leverage tools and technologies to build compelling offerings and individualized services across all the screens of our lives. Through Windward's hands-on demos, presentations and exhibits, Java developers will experience how to save their companies time and money with the complete Java reporting solution.

About Windward Reports

Launched in 2002, Windward Reports is the only full-featured, robust Java and .NET reporting engine to use Microsoft Word (and other MS Office programs) as a layout tool, putting the power of report design and generation in the hands of the end user, technical or non-technical. Any Word user can easily and securely create reports with almost no learning curve. Also unique, Windward Reports implements in hours, offers affordable server-based pricing, and offers “prompt, fantastic” technical support via a 24/7 support forum and support contracts. Windward Reports works by merging any XML, SQL or custom data source—or any combination thereof—with a Microsoft Word report template. It feeds data into the template to create a what-you-see-is-what-you-get report that can be generated in PDF, .RTF, HTML, WordML, .XLS, SpreadsheetML, .TXT, or multipart- MIME-email format. Windward Reports runs as a standalone application or in an enterprise computing environment. Windward Reports developer and production systems are available for purchase or free trial at www.windwardreports.com.

Windward Reports' user group spans 70 countries. User applications include financial statements, inventory reports, product-usage reports, purchase orders, invoices, training certificates, timesheets, and licenses. Other applications include reporting to meet requirements of Sarbanes-Oxley, Patriot Act, ARRA, HIPAA, Health Level Seven, Gramm-Leach-Bliley, Basel II, and other U.S. and international acts and accords affecting financial services, real estate, government, and insurance industries and the consultants and integrators serving them.
