

Windward's Failsafe "Fall Back" Tool for Business Intelligence Software Users

Javelin BI Scheduler Ensures Smooth Transition to Standard Time

FOR IMMEDIATE RELEASE

Boulder, CO – As businesses prepare for this weekend's switch to Standard Time, enterprises that use Windward's [business intelligence software](#) will be able to rely on built-in tools to help with the changeover. Javelin BI, a web-based business intelligence tool, includes an automated scheduler that enables companies to generate vital business reports automatically, on schedule and without interruption.

"No matter what time zone you're in, you can count on having the information you need, when you need it," said Annette Grotz, marketing manager at Windward. "Our reliable report scheduler lets you automate your workload and saves you even more time, so you gain well more than a single hour in a single day. You're gaining hundreds of hours, week after week."

Javelin BI includes a wide array of time-saving devices. In addition to [the automated report scheduler](#), which takes the work out of remembering to run and distribute the reports that guide key business decisions, it takes just minutes to set the criteria for ad hoc and drill-down queries. IT departments don't need to build cubes and copy the data to them because Javelin BI directly calls a business's databases and other data sources.

Plus, pooled resources let companies deploy business intelligence while making the most of an existing system setup. And because [Javelin](#) is platform-agnostic, users can generate reports in any programming language, including Java, Ruby, Python or the .NET family of languages.

About Windward

Windward offers business intelligence, enterprise reporting, document generation and Web-based business intelligence solutions. Launched in 2002, Windward is the only full-featured, robust Java and .NET engine to use Microsoft Word, Excel and PowerPoint as a layout tool, putting template design and report and document generation power in the hands of the end user. Any Office user can easily and securely create reports and documents with almost no learning curve. Additionally, OEMs and VARs use Windward's reporting component.

Windward works by merging any XML, SQL or custom data source—or any combination thereof—with a Microsoft Office report template. It feeds data into the template to create a what-you-see-is-what-you-

get report or document that can be generated in DOCX, XLSX, PPTX, PDF, HTML, direct to printer, RTF, XLS, WordML, TXT, and CSV. Windward runs as a standalone application or in an enterprise computing environment. Also unique, Windward implements in hours, offers affordable server-based pricing, and offers “prompt, fantastic” technical support via a 24/7 support forum and support contracts. A free trial of Windward's products is available at www.windward.net.

The Windward user group spans 70 countries. User applications include financial statements, inventory reports, product-usage reports, purchase orders, invoices, training certificates, timesheets, and licenses. Other applications include reporting to meet requirements of Sarbanes-Oxley, Patriot Act, ARRA, HIPAA, Health Level Seven, IFRS, Gramm-Leach-Bliley, Basel II, and other U.S. and international acts and accords affecting financial services, real estate, government, and insurance industries and the consultants and integrators serving them.
