

Byggeweb (Docia)

Compared to systems where layout and data must be coded, the process of creating a new report is at least 5 times faster. —Michael Bjerregaard Pedersen, Senior Software Engineer

The Challenge

Byggeweb is a leading collaborator for project and facility management tools in the construction industry. Known as Docia abroad (and formerly as Backbone Digital Systems), they needed a reporting solution that could:

- Easily be incorporated into its building and construction software offerings.
- Allow customers to access a comprehensive range of architectural and building reporting tools via the Internet.
- Offer customized report layouts to individual customers.

The Solution

Byggeweb chose Windward Studios instead of building an internal reporting system because:

- The pricing structure allowed them to pass cost savings to their customers.
- They can create individually designed templates for each report for each customer, saving time both short- and long-term.
- Straightforward implementation required only a few lines of code and no additional hardware or software investment.
- Windward offered the ability to implement XML export capabilities in all data classes and create an RTF template for each report.

The End Result

Along with enhanced report layout, Byggeweb achieved:

- Report creation time slashed to 1/5th of the previous amount.
- A simplified report design process from reusing XML export across reports.
- Customized reports with relevant data delivered in the desired channel (onscreen, email, archive storage) for each customer's needs.
