

Nucleus Software

We can lay out a report in Microsoft® Word and get immediate approval from the client.

— Santhi Swaroop Mohanty, Associate Project Manager

The Challenge

Nucleus Software is a leading global IT products and solutions company focused on the banking and financial services sectors. A prestigious bank required reports on a tight deadline, but the solution Nucleus Software planned on using:

- Could not be easily customized to automatically generate customer reports from an XML data feed.
- Took an unacceptably long time to generate reports, jeopardizing Nucleus Software's relationship with the financial institution.

The Solution

Nucleus Software switched to Windward Studios because:

- Report layout, font and formatting are done in Microsoft Office. This makes it quick and simple for Nucleus Software to design report templates and leads to a significant reduction in time spent on reporting.
- The AutoTag plug-in allows users to easily add datasource tags in XPath (as well as other data sources), automating a key report production process.
- Windward's "clear and easy-to-follow documentation" and accessible support team enabled the developers to get the reporting component up and running in the necessary timeframe.

The End Result

After implementing Windward, Nucleus Software:

- Successfully met an important customer's timeline for automated, detailed, month-end customer balance statements.
- Dramatically reduced expensive development time.
- Easily handled a doubling in report volume shortly after implementation.
