

Envoc

Windward helped us meet our customers' specific reporting needs and get our product to market faster.

—Barbara Lasseigne, Product Manager, Envoc

The Challenge

[Envoc](#) is a full service digital agency and the maker of [Spotter](#), a customizable mobile app that streamlines the inspection process by capturing information in the field for immediate analysis. Spotter required a reporting component that allowed for:

- Text and email alerts on flagged questions, including photos, descriptions and GPS location.
- Follow-up editing for clean reporting.
- Specific, mandated template and report output requirements.

The Solution

Envoc added Windward to its solution because of three main factors:

- **Speed to market.** Reporting applications are not a part of Envoc's core competency, and outsourcing the reporting component shortened the product release cycle.
- **Ease of integration.** In order to integrate the Windward engine into an application, all that's required is to embed just 14 lines of code.
- **Specific output capabilities.** Windward's output allows for embedded photographs, formatting that meets government regulations, and a customizable layout that meets customer and management requirements.

The End Result

After implementing Windward, Envoc was able to:

- **Design and modify templates quickly and easily.** AutoTag is so easy to use, some Envoc customers are using the tool to modify reports themselves.
- **Display photos, digital signatures and other vital customer assets in reports.** Windward enables Envoc to marry all that information in one place.
- **Generate reports in the exact layout and output required.** Envoc customers are able to meet a variety of government, internal and customer report layout and output requirements.
