

The Javelin Reporting Portal

The Javelin reporting portal is an online platform that enables users to manage, schedule and run reports with just a few clicks. This portal is perfect for organizations that need a centralized hub for template management, report scheduling, and document generation needs. Combined with Windward's AutoTag template designer, the Javelin Reporting Portal gives you everything you need to get up and running with great-looking reports, fast.

Key Features

- Upload and manage multiple templates and PODs
- Assign user roles for better security and workflow
- Schedule and deliver reports in different output formats
- Update information in multiple templates with a single click
- Easily find past runs of reports

Key Benefits

- Manage your reports in a centralized location
- Automate report delivery with a flexible report scheduler
- Save time and decrease errors by fast template updating through PODs
- Get up and running faster with a complete platform for all your reporting needs

Design and Deliver

The Javelin reporting portal provides reporting and document generation infrastructure for organizations and allows you to easily set up your preferred process. Simply organize all available templates inside folders and set up your schedules — and Javelin will take care of the rest.

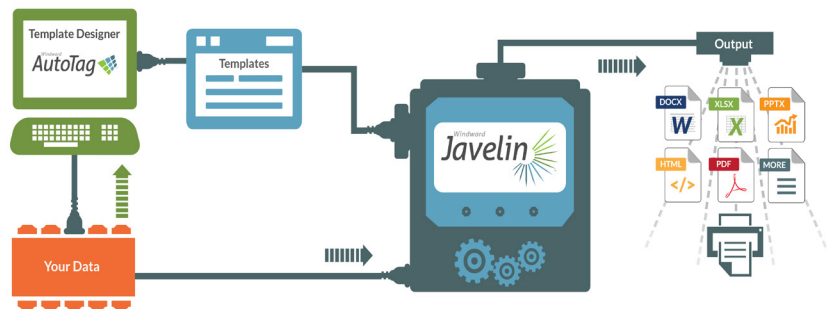

It is easy to specify multiple output formats for each report and do so for multiple reports at one time. Need ad hoc reports but only want certain users to have access? Javelin makes it possible to set up

templates are updated instantly as well. This saves time and ensures consistency.

Requirements/Compatibility

Javelin requires the following tools to be installed for its operation:

- Microsoft .NET Framework 4.5.1
- Windows 7/8/10 with 4 GB RAM or higher
- IIS 7
- SQL Server 2008/12/14 (Express or Full)
- Browsers: Internet Explorer 11 or higher, Chrome

permissions for users to be able to run reports while keeping other parts of the platform locked.

Javelin can also recognize relationships between templates and POD files, which means that when a POD file gets updated inside of the platform, all corresponding

See for Yourself!
