

Systems Integrators: Why Choose Windward?

Windward Studios serves companies that recognize great reporting and document generation is fundamental to developing innovative business solutions. Windward is here to assist in the collaborative process and to help systems integrators deliver the most inventive solutions to their clients.

5 Reasons Why Windward is Ideal for SI Firms

#1 Flexibility

Your firm takes on challenges that require unique combinations of business solutions. At Windward we understand that one size does not fit all, so our reporting tools are flexible for varying needs. The AutoTag template designer allows your clients to create customized report templates in the familiar Microsoft Office suite, connect to multiple data sources, and generate output in a wide range of formats.

Key Benefits

- Flexibility to create unique reporting solutions.
- Scalability for reaching long-term goals and objectives.
- Faster time to market due to simplified coding and testing.
- Lower development costs through customized licensing, easy installation and A+ technical support.
- Templates freed from formatting restrictions via Office's styles, charts, tables, shapes and more.

#2 Scalability

Your clients deserve long-term solutions, not just quick fixes for problems that must be dealt with later on. The Windward Engine is a set of code libraries designed for integrating reporting and docgen capabilities into internal and commercial software applications. Windward allows your clients to scale vertically by adding more resources to a single server or scale horizontally by adding more servers to a larger system.

#3 Unmatched Support

You wouldn't recommend a reporting solution that would leave your clients to fend for themselves. Use a reporting solution that comes with the support your customers will love. Windward is proud of its 5-star support rating on numerous independent sites as well as a 98% customer satisfaction rating.

#4 Reporting Speed

Other reporting solutions have too large a footprint to generate the output speed Windward achieves. Our Engines measure output in pages per second, not seconds per page. Memory usage is constant; running 1,000 reports uses the same amount of memory as running 100,000 reports. Clients can test

performance on their own target systems with our embedded testing code, and Windward tests engine performance metrics during all major change implementations.

#5 Product Development Through Customer Input

Windward has created numerous ways for our SI clients to be involved in the development process. From promoting strong relationships with our Technical Account Managers to creating product feedback avenues within our customer rewards program, Windward is here to allow your firm to stand apart.

See for Yourself!
