

The Windward Engine

The Windward Engine is for enterprises that need fast and powerful report and document generation. It is a set of code libraries that enables you to integrate customizable reporting into internal and commercial software applications. When combined with Windward's AutoTag template designer, the Windward Engine gives you what you need to get up and running with great-looking reports, fast.

What You Get

- An extremely fast engine that leaves engines from other reporting systems in the dust
- A small memory footprint that does not require a dedicated server
- **Datasource compatibility.** The Engine works with virtually any data source, and you can intermix different source types in a single report
- A simple and straight-forward API so you can generate reports right from your code
- Generation measured in pages per second and the ability to produce hundreds of thousands of reports per day.

Key Benefits

- User-friendly reporting that makes your customers happy
- Faster speed to market for your own application
- Lower development costs while you get back to your core business.
- End user control over document design and generation

Powerful Report Generation

Windward simplifies how you add reporting functionality into your software application with an engine that reduces complexity, production time and total costs.

The Engine can be installed within minutes and fully deployed within hours. By enabling end users to create reports independently of your development team, Windward offers unprecedented production capabilities without sacrificing power or functionality.

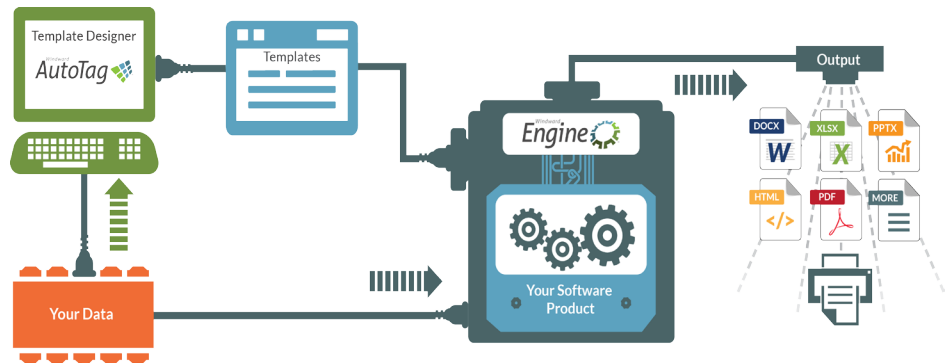

And because it uses Microsoft Word, Excel and PowerPoint as

The Windward .NET Engine or Windward RESTful Engine can be installed on any machine running the .NET 4.5.1 framework or higher. It can run on a variety of 32-bit, 64-bit, and .NET Compact Network operating systems.

Minimum requirements:

- Processor 1 GHz or higher
- Memory (RAM) 2.5 GB
- Hard Disk 240 MB

The Windward Java Engine can be installed on any machine running the Java Runtime Environment 1.6 or higher. Minimum requirements:

its layout tool, Windward requires little training and no new software to learn.

Requirements/Compatibility

NOTE: Microsoft Office is NOT required to be installed on the Engine in order to generate reports.

- Processor 1 GHz or higher
- Memory (RAM) 256 MB
- Hard Disk 219 MB
